CAMPAIGN TARGETS & EXPECTED OUTCOMES

14-DAY SPRINT

Acquisition volume, blended CAC, in-app utility metrics and viral growth levers.

PROJECTED USER ACQUISITION: 4,500 – 8,500 VERIFIED SIGN-UPS — **BLENDED CAC: $1.80 – $3.40 USD**

With a total campaign spend of up to $15,400 USD across Pan-Africa (anchored by South Africa, Nigeria, Kenya, and Mozambique as key examples), you can realistically target 4,500 to 8,500 verified student sign-ups over the 14-day live sprint. Because the campaign uses a multi-channel acquisition model combining paid social media, mobile data micro-drops, and peer-to-peer squad loops, your blended Customer Acquisition Cost (CAC) stays low between $1.80 and $3.40 per verified user.

1. USER ACQUISITION BREAKDOWN BY CHANNEL

ACQUISITION CHANNEL	BUDGET / INCENTIVE DRIVER	EXPECTED VOLUME	CONVERSION MECHANICS
Paid Campus Social Ads (TikTok & IG)	$950 ad spend (~$0.25–$0.45 CPI in African student markets)	**2,000 – 3,500 users**	Hyper-local 3–5 km radius ads around anchor universities driving direct app installs.
Mobile Data Micro-Drops & Viral Referrals	$1,500 data pool (~1,000–1,500 bundles at $1–$1.50 each)	**1,500 – 3,000 users**	Students must invite 3+ friends into a LIIVRR Circle to unlock instant 1GB–2GB airtime/data vouchers.
8 Virtual Campus Ambassadors & Societies	$800 stipends + $2,000 Squad Leader prizes	**700 – 1,400 users**	Direct seeding into university WhatsApp/Telegram residence groups, CS clubs, and student societies.
Track 1 Builders & Hackathon Devs	$4,000 developer prize pool	**300 – 600 users**	Computer science students forming teams of 2–4 to build Nova agents and venue plugins.
TOTAL CAMPAIGN REACH	**$15,400 Total Budget**	**4,500 – 8,500 Users**	**Blended CAC: $1.81 – $3.42 / user**

2. EXPECTED IN-APP ENGAGEMENT & CONTENT OUTPUT

ACTIVE STUDENT CIRCLES (SQUADS) — **600 – 1,100**

Averaging 4–6 members per squad, locking in social retention rather than isolated sign-ups.

IN-VENUE MOMENTS & REVIEWS — **2,500 – 5,000**

Photo/video Moments uploaded tagging local spots across Johannesburg, Cape Town, Lagos, Nairobi, and Maputo.

CUSTOM AI AGENTS & PLUGINS — **40 – 80 Prototypes**

Working prototypes (menu concierge bots, group bill-splitters, vibe-check tools) built by university dev teams.

EXTERNAL SOCIAL IMPRESSIONS — **250K – 600K+ Views**

Organic views on TikTok & Reels driven by the “Pass the Vibe” relay clips and City vs. City leaderboard rivalries.

3. KEY LEVERS THAT PUSH YOU TOWARD THE 8,500+ UPPER LIMIT

- **Instant Data-for-Invite Triggers:**

  African university students respond fastest to immediate utility. Automating the 1GB data drop the second a 4th member joins a student’s Circle creates a self-sustaining referral loop that cuts your paid ad reliance in half.

- **Pre-Loaded Venue Drops on Day 1:**

  Having at least 3 to 5 live restaurant or nightlife vouchers active inside LIIVRR in each anchor city before Day 1 ensures that paid ad clicks convert into immediate active sessions rather than app churn.

- **City vs. City Pride:**

  Publishing a daily visual leaderboard pitting Lagos vs. Joburg vs. Nairobi vs. Maputo triggers competitive sharing inside campus group chats at zero extra ad cost.
